Paediatric TB

†3275. SHRI SURENDRA LATH: Will the Minister of HEALTH AND FAMILY WELFARE be pleased to state:

(a) whether it is a fact that the paediatric TB is still a concern in many States including Orissa;

(b) if so, what are the figure of paediatric TB cases in the country, State-wise;

(c) what are the measures taken by Government to eradicate the paediatric TB in the country, especially in Orissa State; and

(d) What is the position of funds in the various States with regards eradication of paediatric TB?

THE MINISTER OF STATE IN THE MINISTRY OF HEALTH AND FAMILY WELFARE (SHRIMATI PANABAKA LAKSHMI): (a) and (b) Yes, Sir. Paediatric TB is of concern as it is a reflection of the prevalence of sputum smear positive pulmonary tuberculosis and the extent of transmission of TB infection in the community. 6 to 8% of all new TB

†Original notice of the question was received in Hindi.

cases reported under the Programme are of paediatric age group (0 to 14 years). In the year 2006, the percentage of paediatric cases reported at National level and Orissa State was 6% and 4% respectively. The state-wise details about paediatric cases (0-14 yrs.) registered under the Programme during year-2006 is given in Statement-I (see below)

(c) As paediatric TB is a reflection of extent of transmission of TB infection in the community, detection and cure of adult tuberculosis will prevent the transmission of TB infection and hence reduce the burden of paediatric tuberculosis. Various steps taken under the Programme to cut the chain of transmission and control of tuberculosis cases are:

To achieve and maintain a cure rate of 85% amongst new sputum positive cases and to detect and maintain a case detection rate of at least 70% amongst such cases.

Uninterrupted supply of quality drugs to patients in patient-wise boxes for the entire duration of treatment under direct observation (DOTS).

Paediatric patient-wise boxes have been introduced from the year 2006 onwards to improve compliance and acceptability of Directly Observed Treatment (DOT) in paediatric age groups.

All Children < 6 yrs of age who are household contacts of smear positive TB cases are screened for TB and after excluding active tuberculosis are offered chemoprophylaxis using Isoniazid (INH) 5mg/kg body weight.

BCG vaccination is available under the Universal Immunization Programme (UIP) in the country which prevents severe form of TB in children.

(d) Management of paediatric TB is one of the activities under Revised National Tuberculosis Control Programme. State-wise detail of funds allocation and expenditure during the last 3 years is given in statement-II.
